

From target training to a reusable detector

claim boundary | stress test | repair | deployment

1 ORIGINAL CLAIM

Target KPI + labels
per-series TShape training
strong EasyTSAD F1 / F1-E

2 REUSE STRESS TEST

One frozen model meets unseen KPI
shape, scale, and noise shift
normal / incident scores overlap

3 ALGORITHMIC REPAIR

Synthetic Pattern Bank -> TShape
residual guard under shift
fixed open-box score fusion

4 PRODUCT CONTRACT

0.138-MiB checkpoint + scorer
834 series / 44 configurations
CLI + web + channel attribution

We do not refute target-trained TShape; we engineer and test the stronger frozen-checkpoint contract.
